Our Charter

- Assess commercial IT research so that advances may be quickly applied to the spiral development of combat information management systems.
- Identify approaches for creating combat information management systems and for developing rule-based information distribution processes.
- Identify interoperability issues for joint and coalition information requirements.
- Investigate and document where DoD resources need to be applied to support the military unique requirements in combat information management.
- Develop an implementation plan.

Study Assumptions

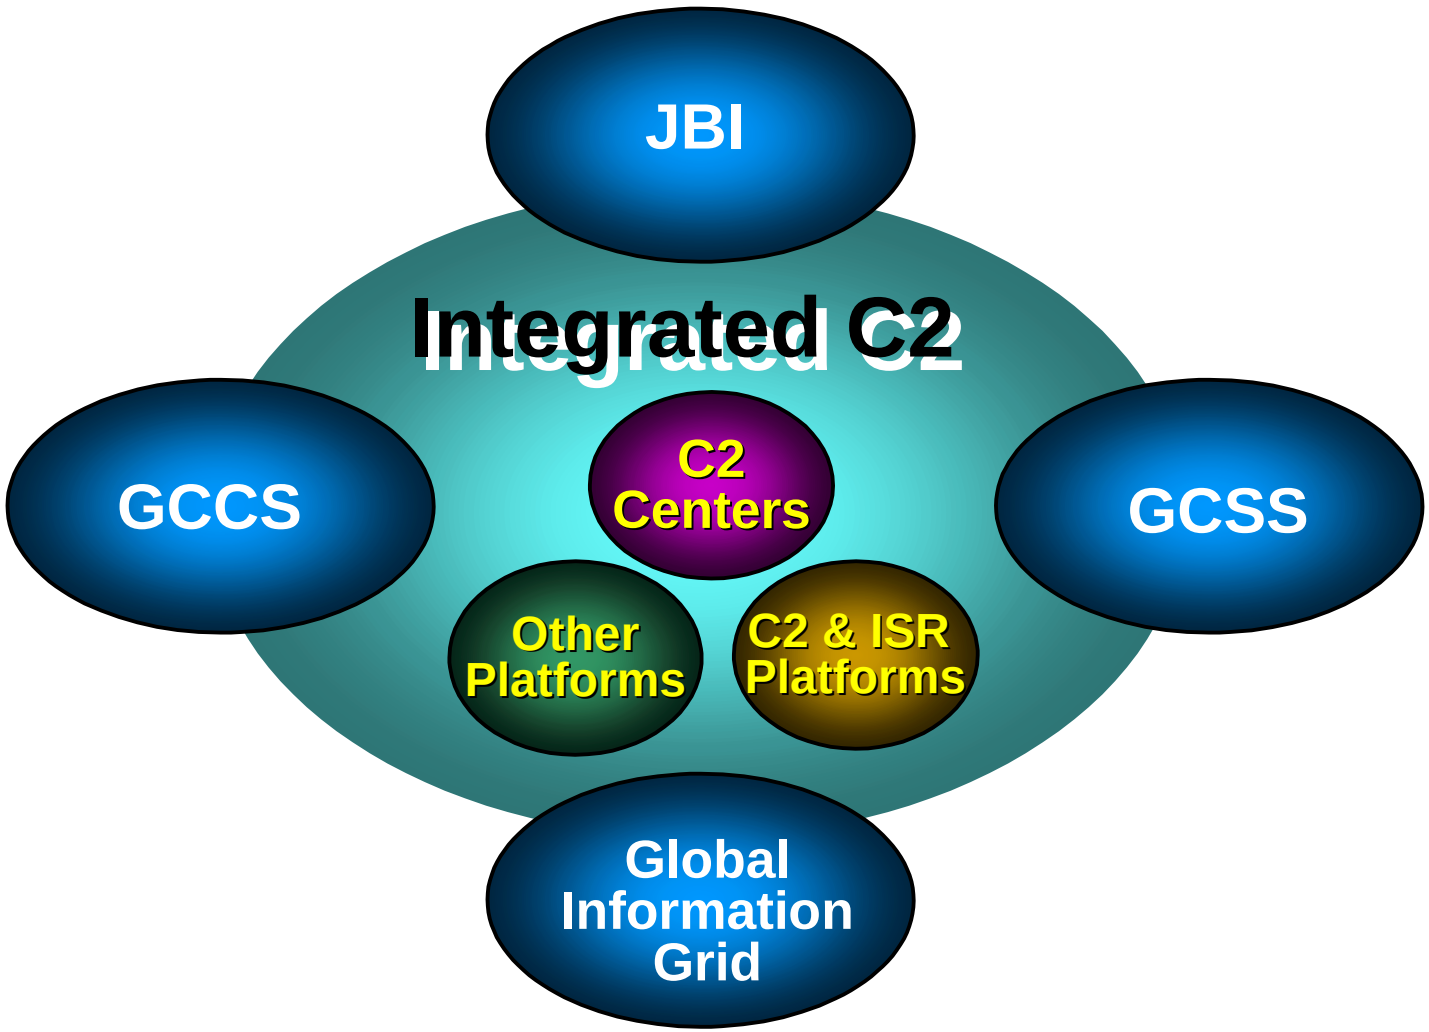
- Current commercial developments and DoD technology deployments will yield sufficient bandwidth, connectivity, computation, storage
- JBI information assurance/protection assume broader DoD efforts, but also include study-generated recommendations for JBI protection & adjustment to degradation of information management capability

JBI Basics

The JBI is a system of systems that integrates, aggregates, and distributes information to users at all echelons, from the command center to the battlefield. The JBI is built on four key technologies:

- Information exchange
  - Publish/Subscribe
- Transforming data to knowledge
  - Fuselets
- Distributed collaboration
  - Shared, updatable knowledge objects
- Force/Unit interfaces
  - Templates
    - Operational capability
    - Information inputs
    - Information requirements

The Vision



JBI
Integrated C2

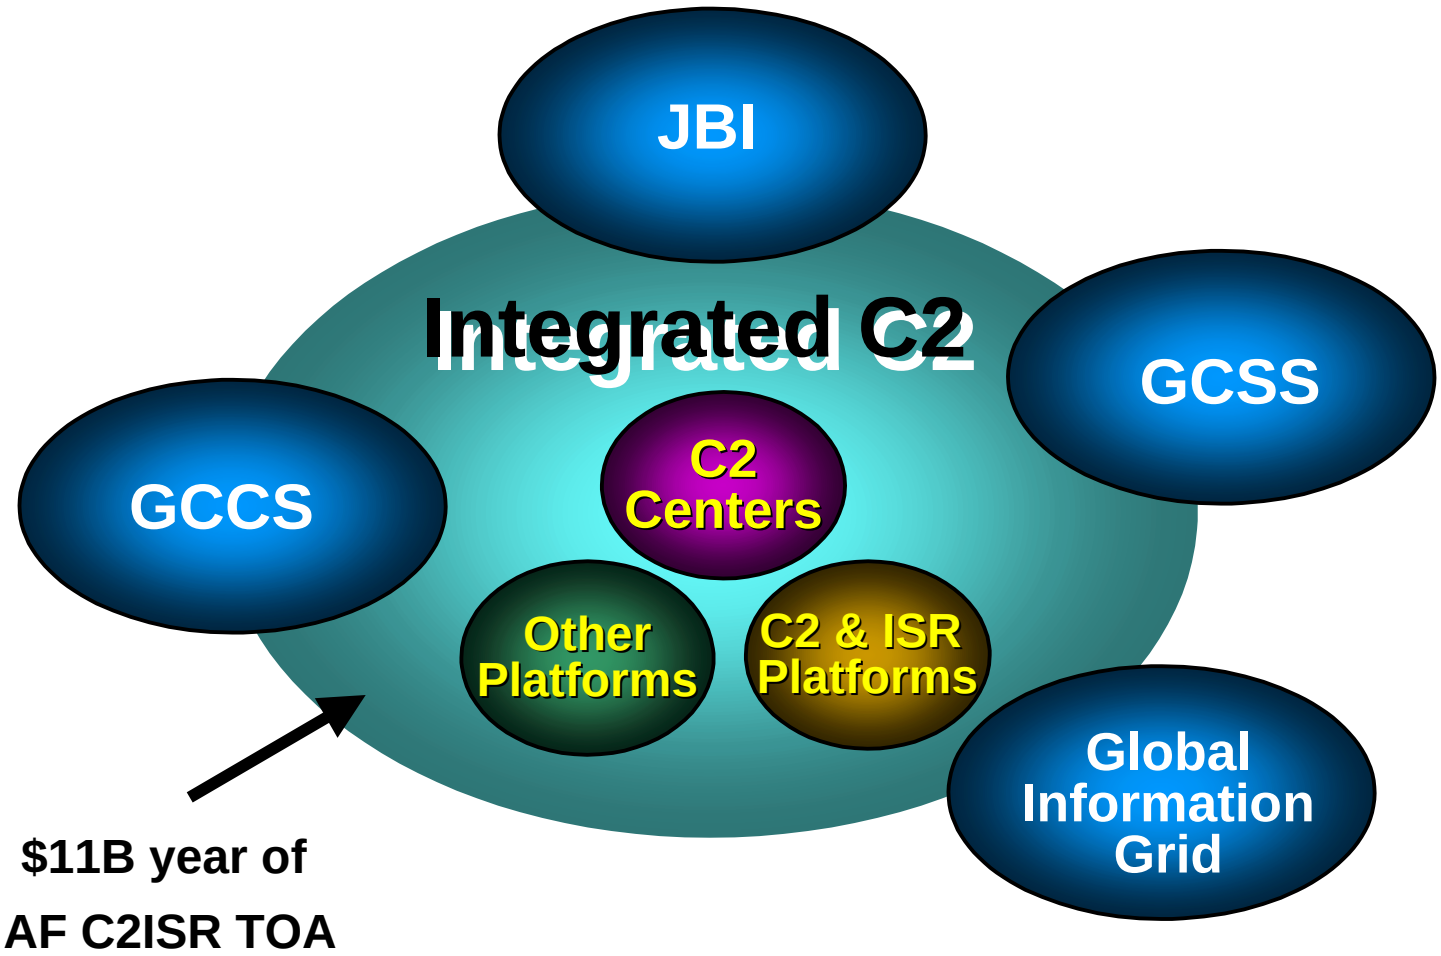
Information
Grid

The Vision



Vision: Single AF Enterprise - Wide Management Structure

Commander's Perspective

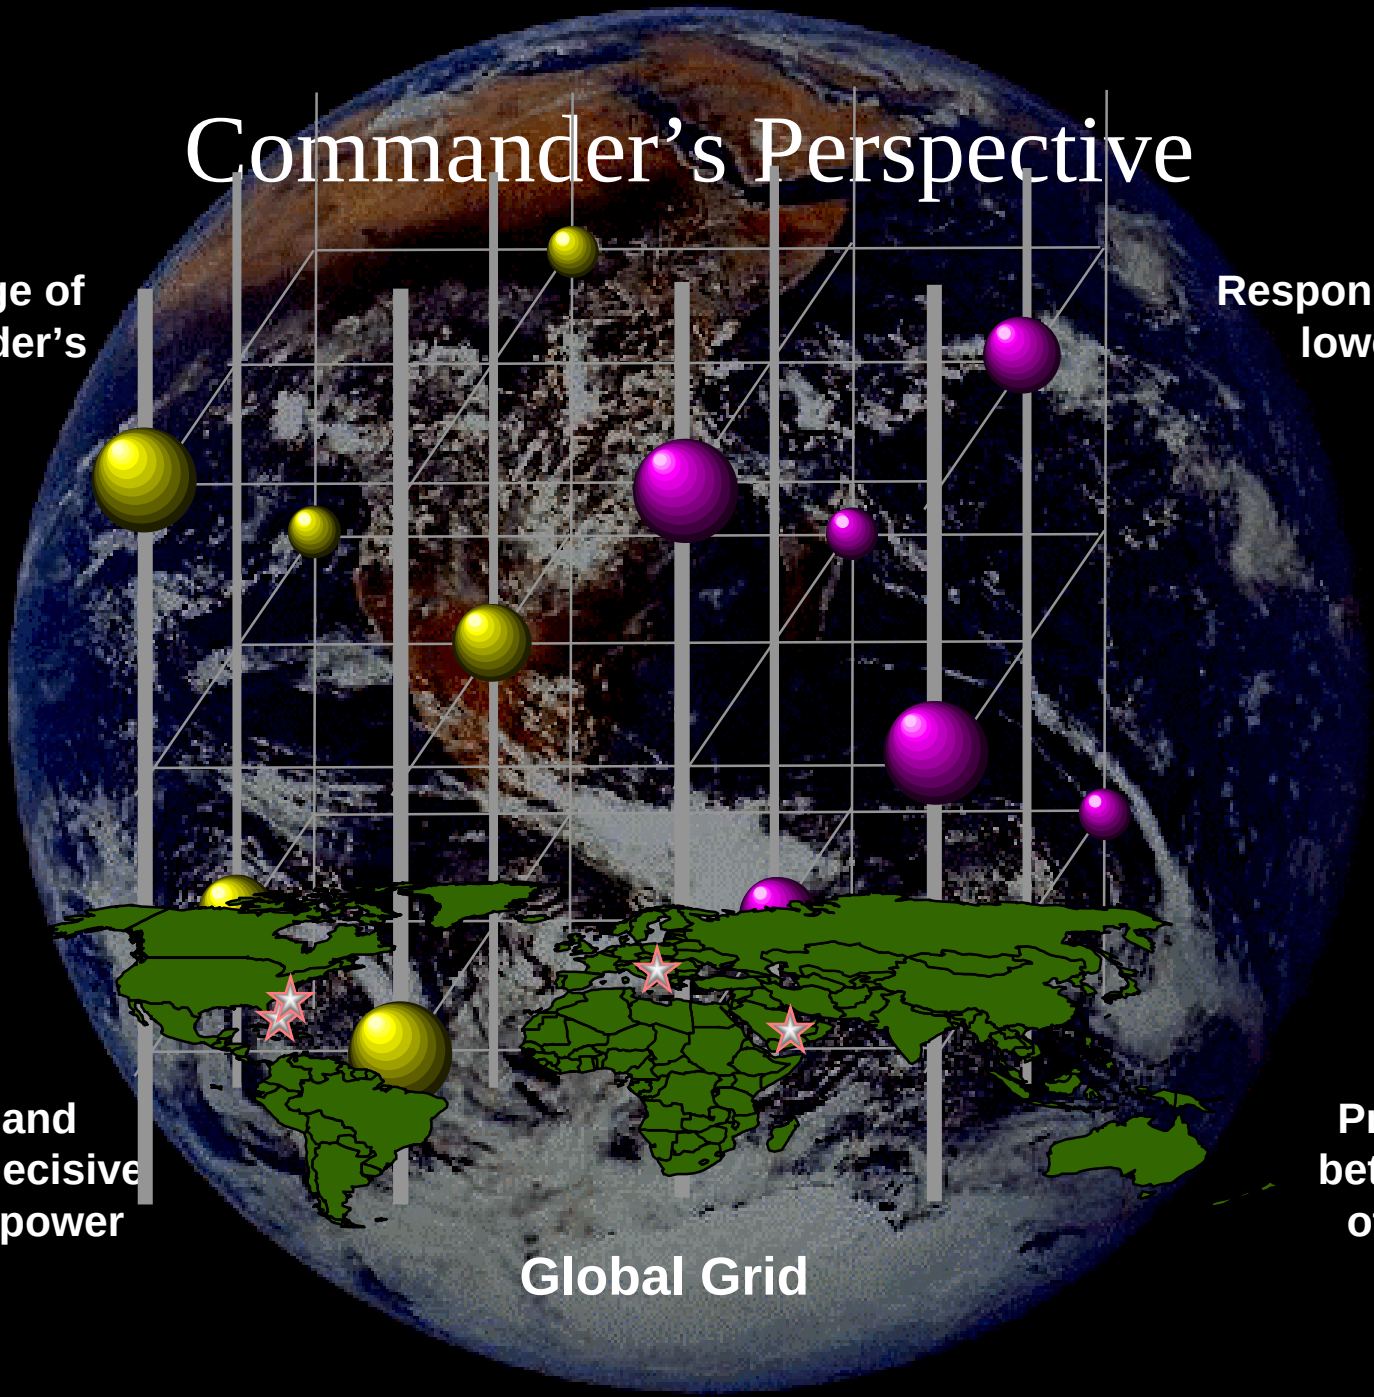
The World Has Changed…To Meet Our Responsibilities we must:

Assemble disparate forces and resources into one joint tailored force rapidly and effectively to employ anywhere in the world

Commander's Perspective

Knowledge of Commander's AOR

Respond to crisis at lowest level

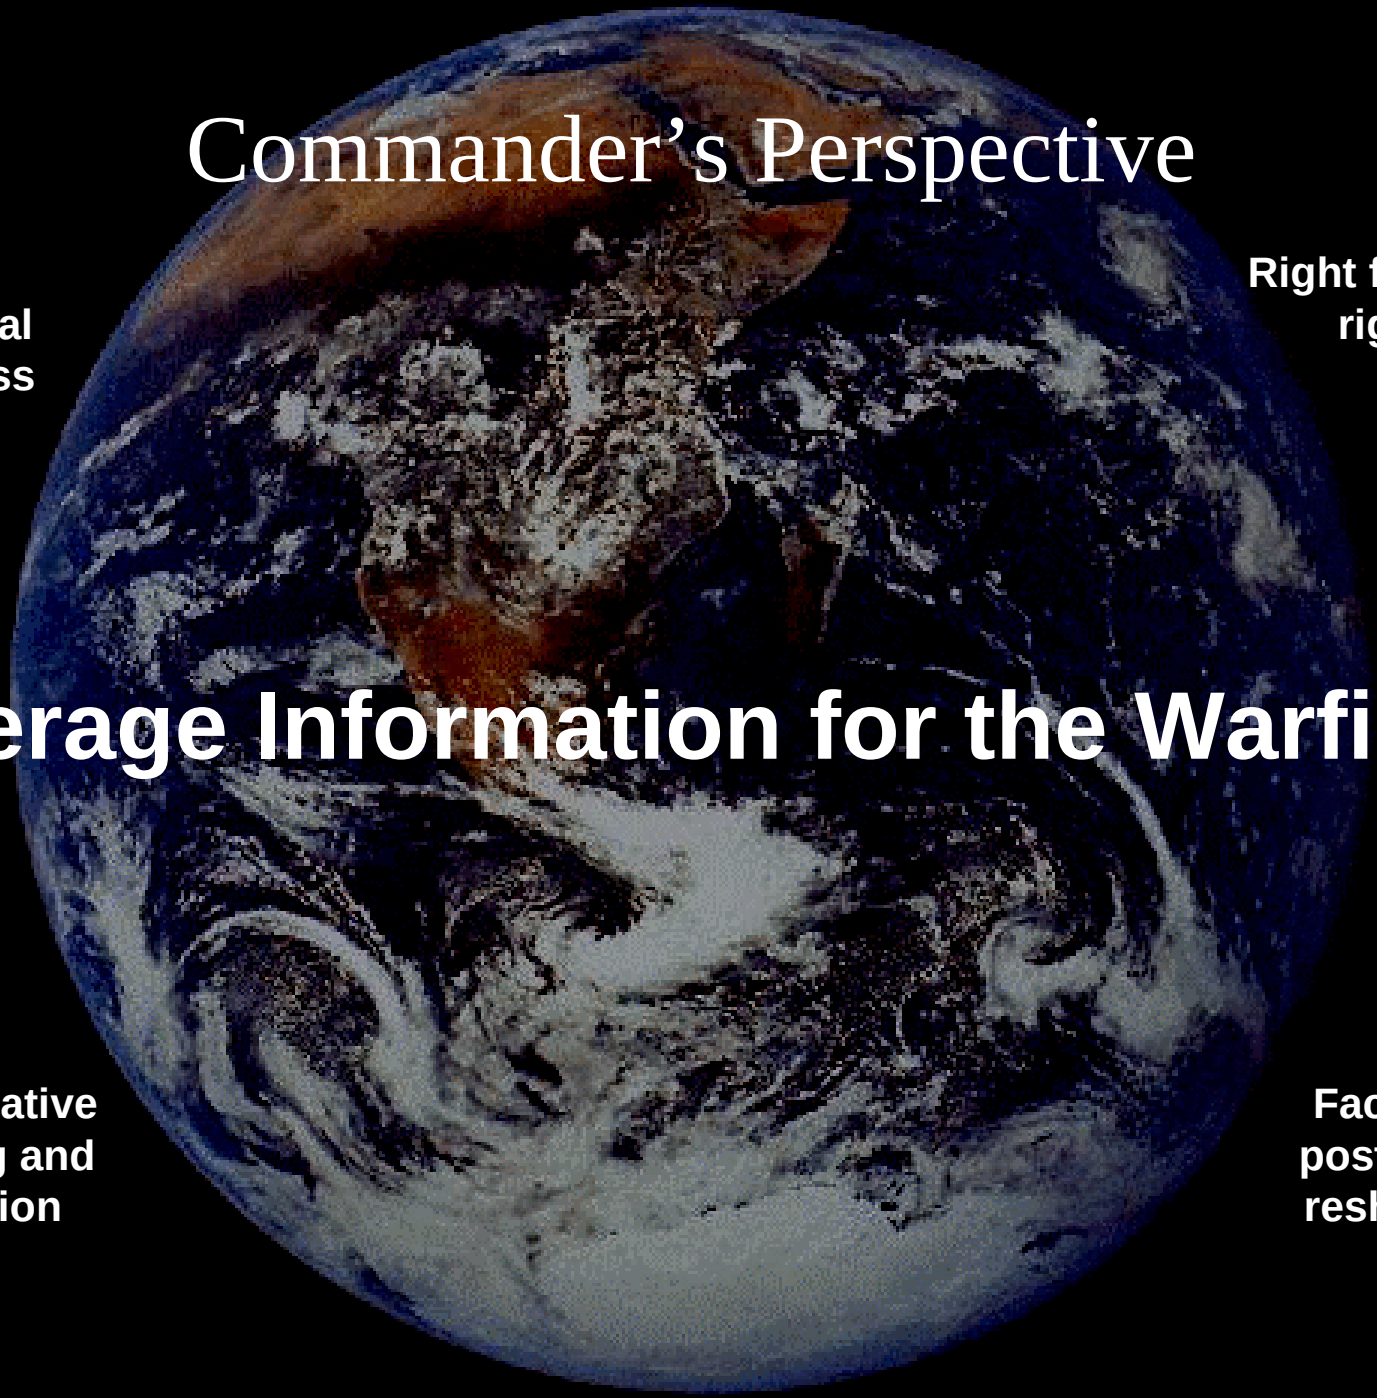


Build and employ decisive combat power

Provide a better state of peace

Global Grid

Commander's Perspective



Total situational awareness

Right forces at the right time

Leverage Information for the Warfighter

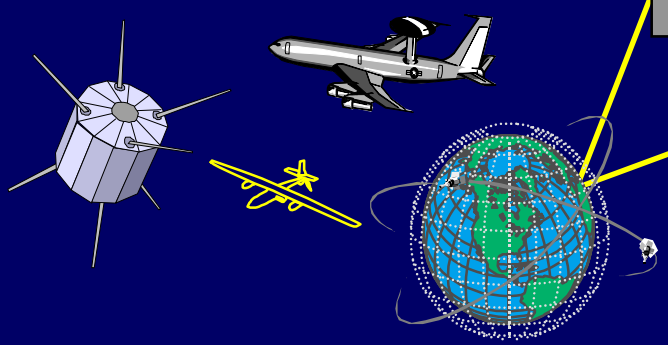
Collaborative planning and execution

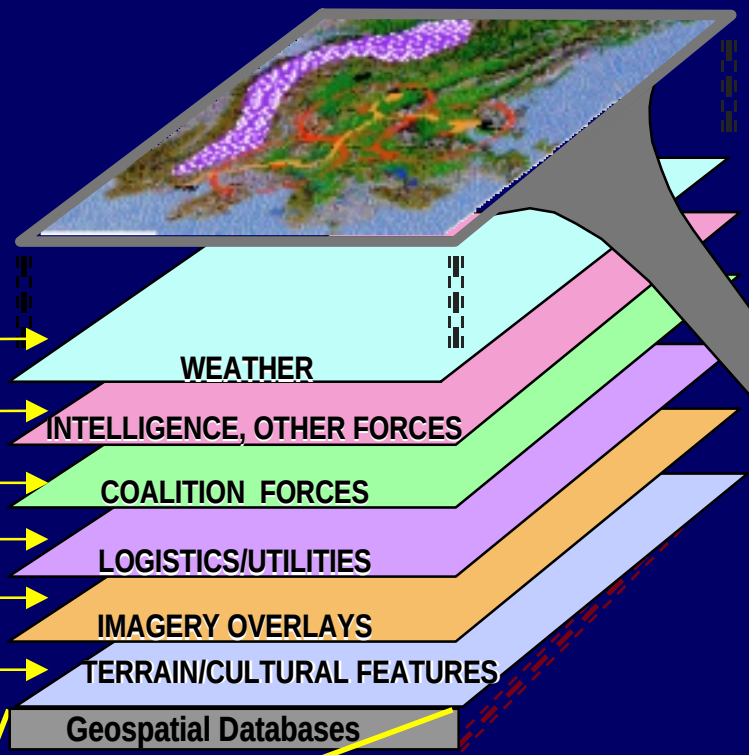
Facilitate post crisis reshaping

Information Preparation of the Battlespace

Information Providers

- Intel Sources
- Air Surveillance
- Surface Surveillance
- Space Surveillance





Common Operational Picture

JBI

Commanders

Respond to Crisis by Activating the JBI

CINC/JTF creates JBI for specific purpose

- **Organized around crisis or combat operations**
- **Commander defines operational policies, concepts and access**
- **Globally interoperable infrastructure and services**
- **Used for contingency training and exercises**

Respond to Crisis by Activating the JBI

- Activate operational template
  - Enhance situational awareness
  - Exploit information operations
  - Robust Command and Control capabilities
  - Task forces as required
  - Synchronize logistics
  - Deploy and bed down forces

- JBI Enablers
  - Templates automate the tracking of data (publish and subscribe)
  - Automate the management of ISR tasking and dissemination
  - Fuselets refine and integrate data into useful information
  - Prioritized comm requirements to maximize reachback capabilities

Building Decisive Combat Power

Force Template

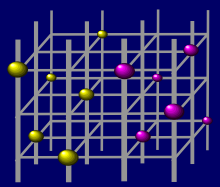
Information handshake between the JBI and the combat unit (defines subscribe and publish data to JBI).

Information interface requirements:

- Information required to accomplish mission
  - Example: Required accuracy of targeting information

C2 and ISR capabilities:

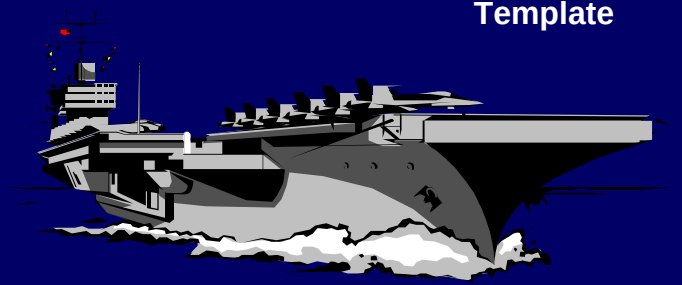
- ISR inputs to JBI
  - Example: weapons pod camera



Force Template

Force capabilities:

- Sortie rates (steady state and surge)
- Employment restrictions
- Munitions (TLAMs)
- Current readiness state
- Logistics requirements



!

Building Decisive Combat Power

- Employ for combat operations
  - Determine NCA guidance
  - Publish Commander's intent and desired effects
  - Determine centers of gravity
  - Develop and analyze COAs
  - Direct component detailed planning
  - Components develop scheme of maneuvers
  - Employ lethal and non-lethal weapons
  - Execute and assess effects
- Enabling JBI features
  - Automatic option generation and evaluation
  - Collaborative planning between echelons and across components
  - Continuous update from source to decision support and analysis tools

Tailoring to the User's Needs

- User modeling - Real-time understanding of user(s)' goals, plans, and preferences
- Context understanding - Real-time translation of user(s)' situation, tasks at hand, and device used

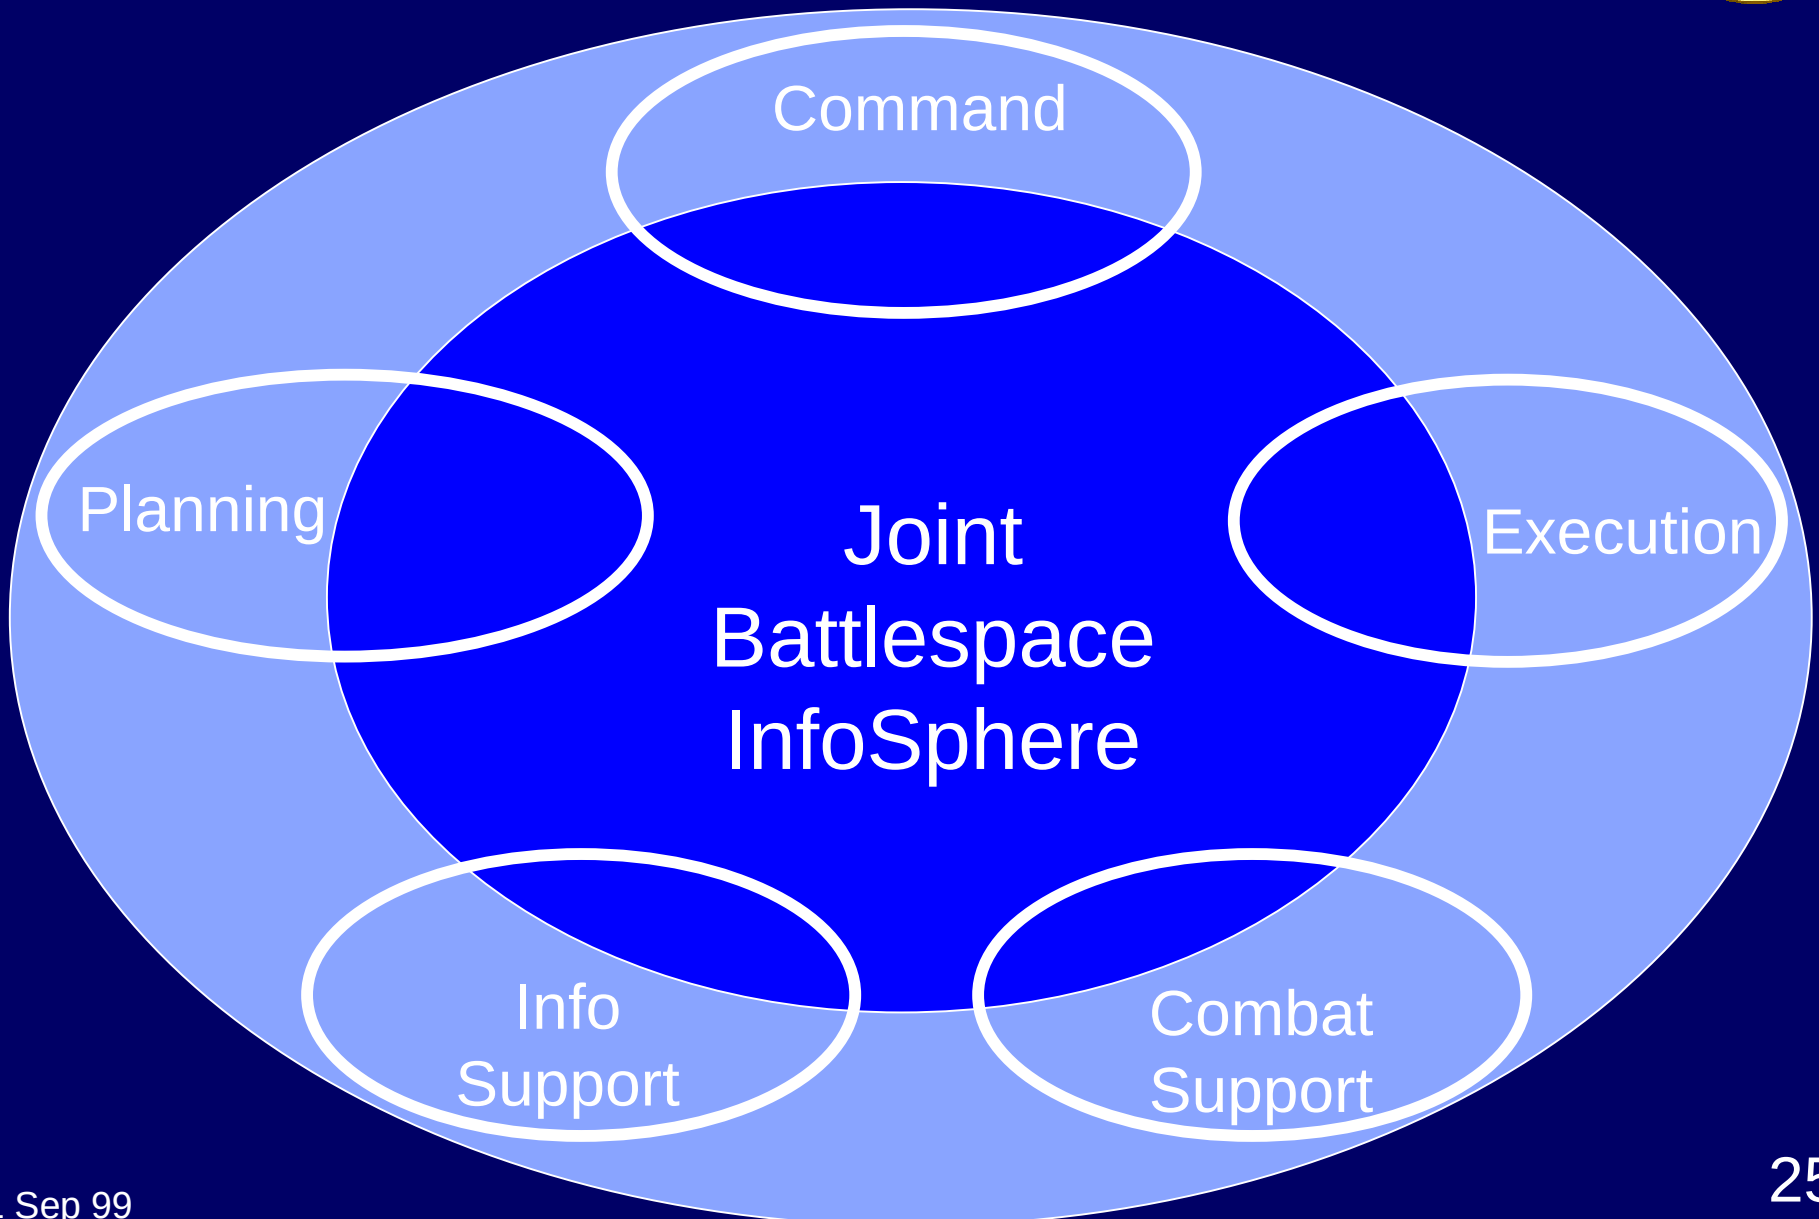
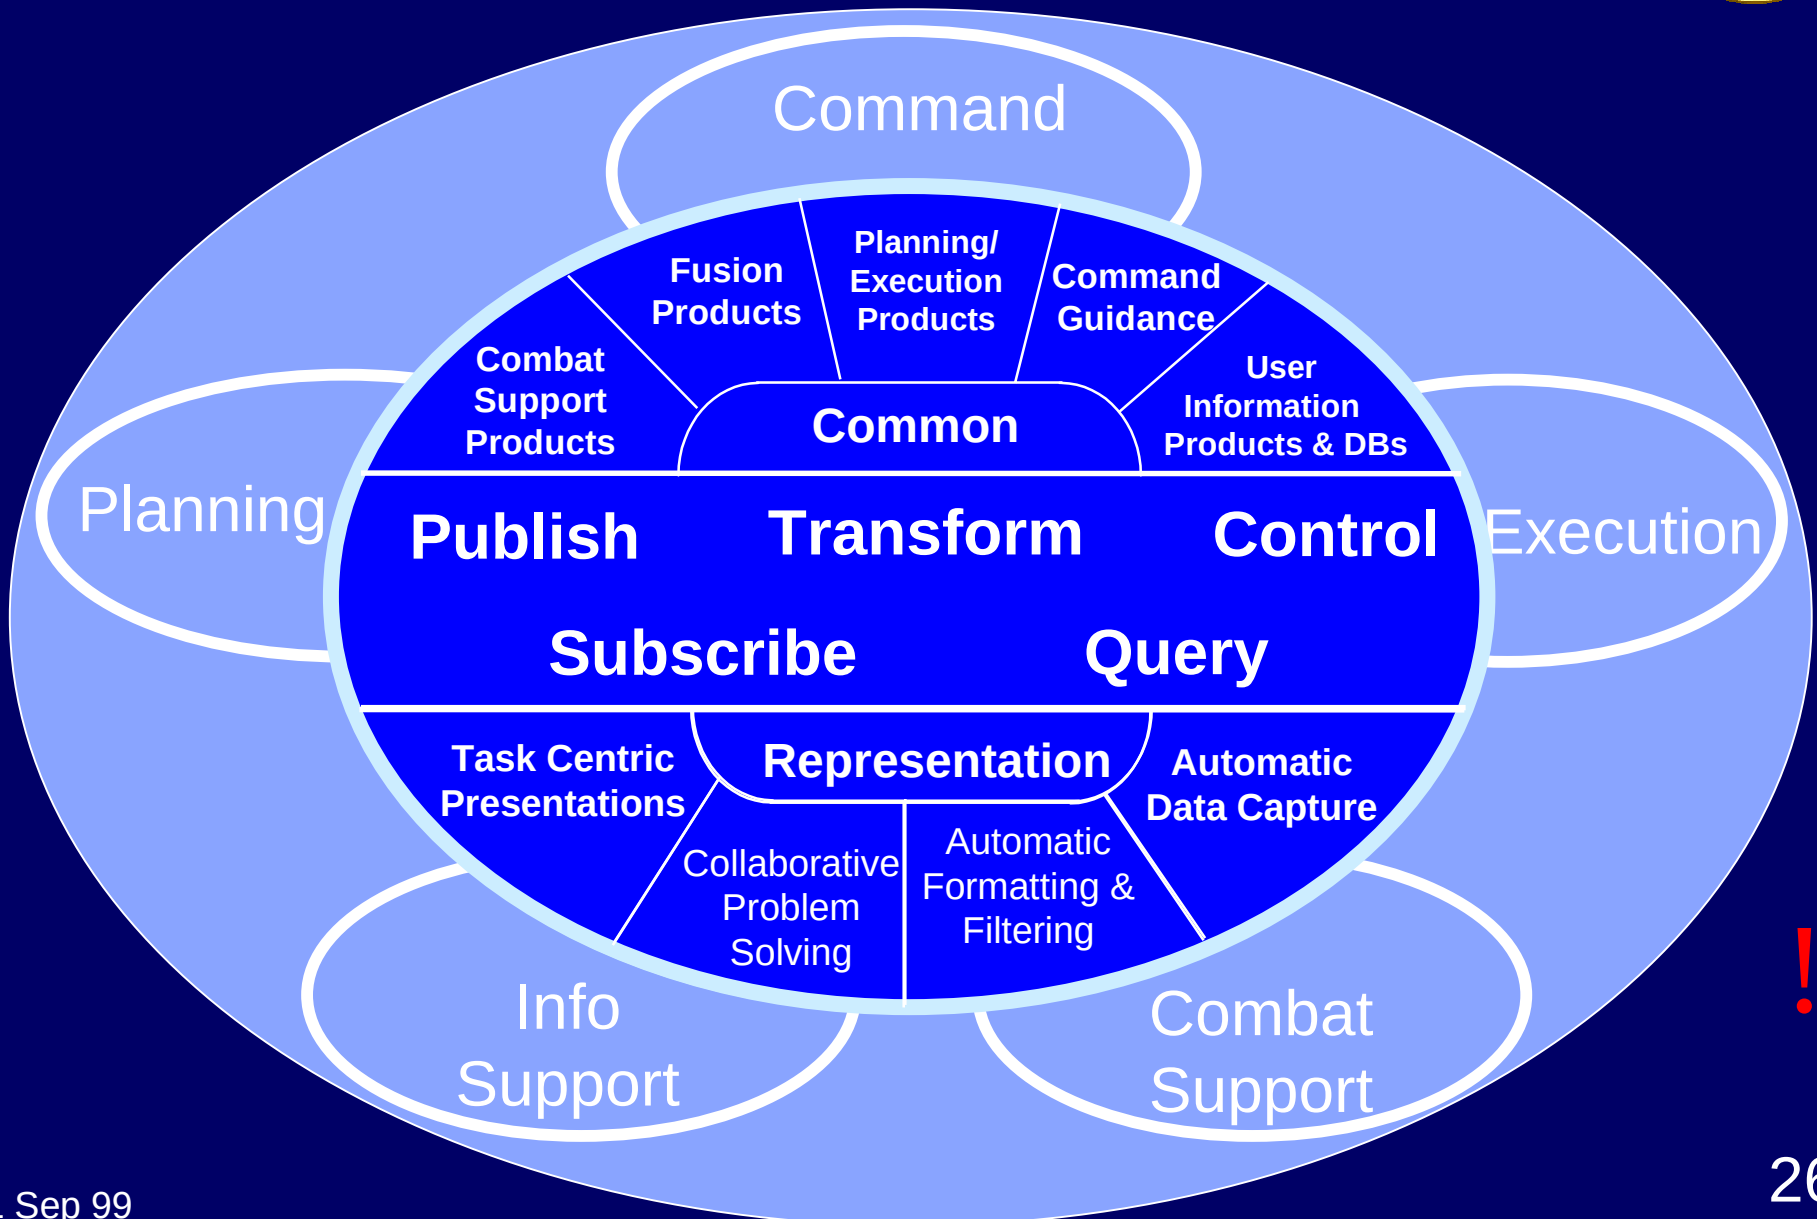
Interacting with the JBI

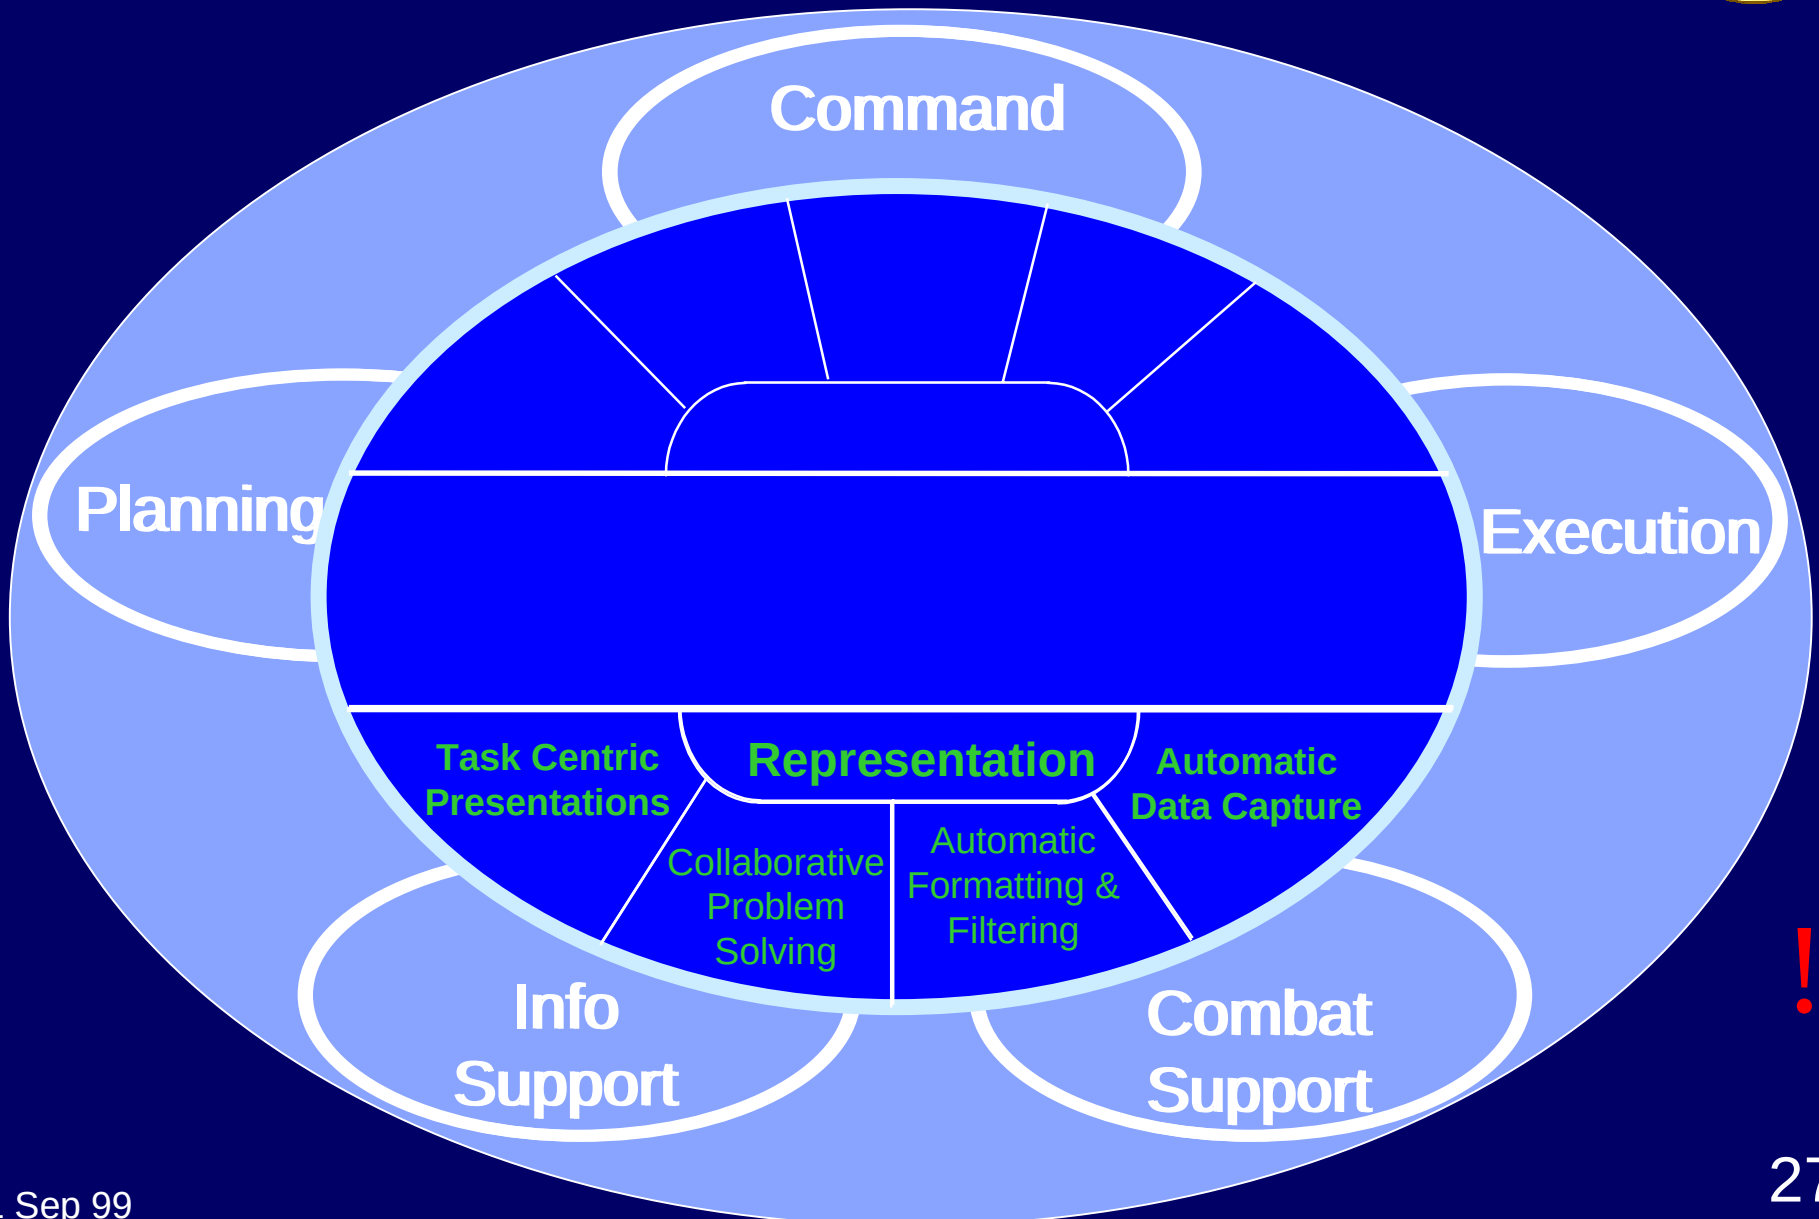


Interacting with the JBI



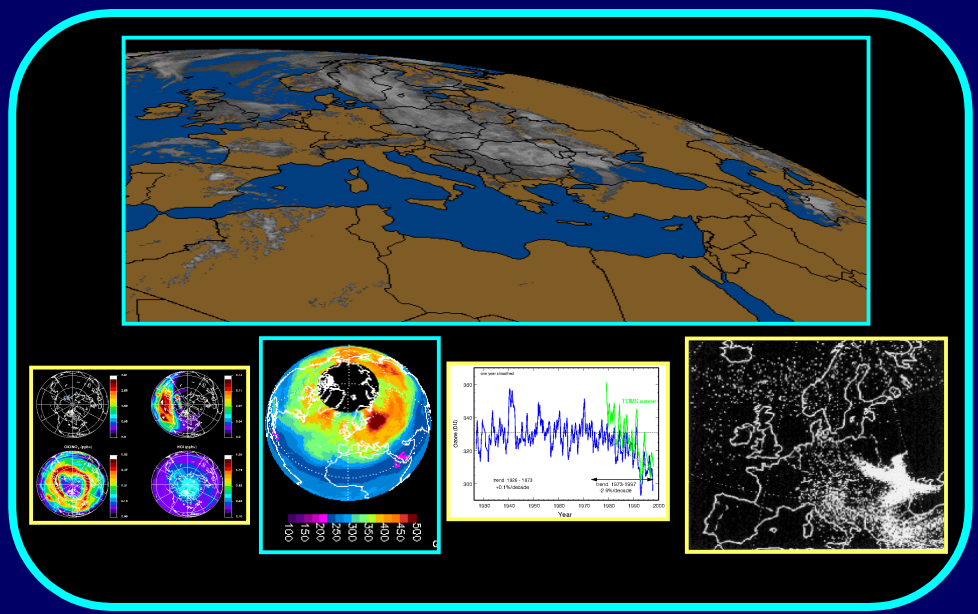
!

Interacting with the JBI



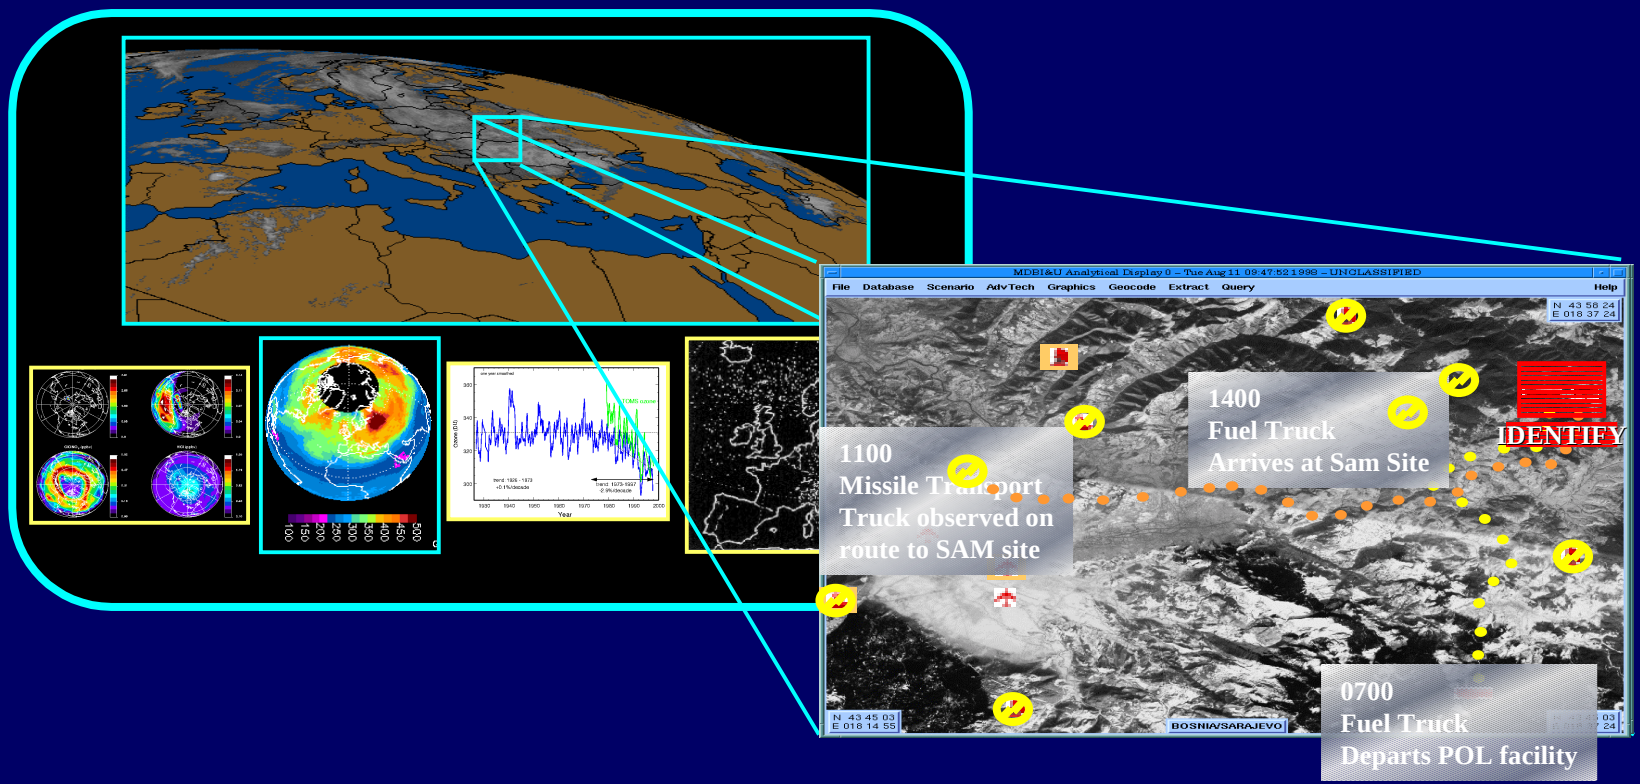
Task Centric Decision Making Command Example

Commander *subscribes* to current status information to monitor area of responsibility.



Task Centric Decision Making Command Example

JBI *transforms* alert to support Commander's task and preference.



Collaborative Problem Solving Planning Example

Staff *queries* JBI for available assets.
Asset commanders directed to *subscribe*.
Weather specialist *publishes* weather status.

Collaborative Problem Solving Planning Example

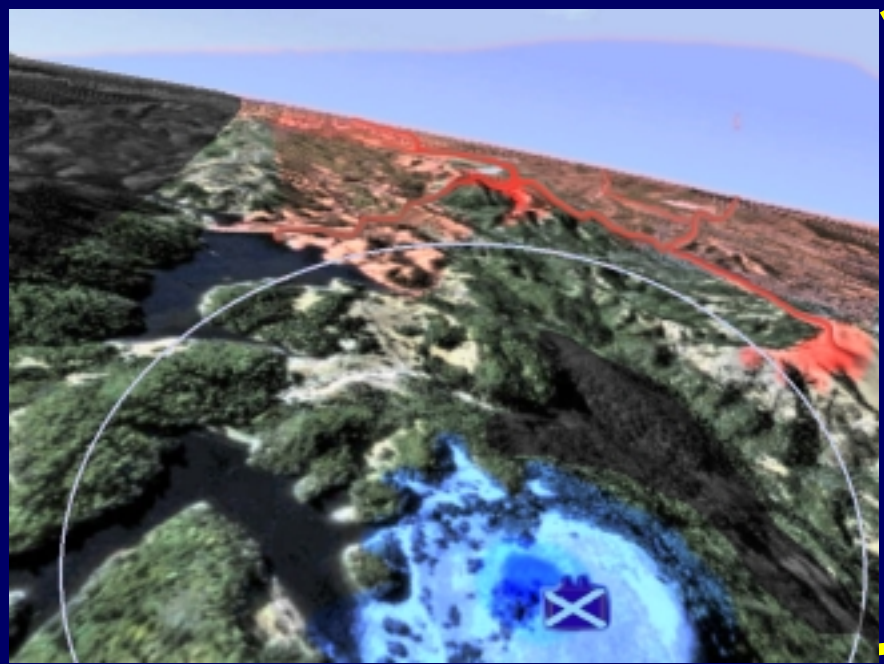
Staff *subscribes* to collaborator assessments and *publishes* ATO execution.

Automatic Formatting and Filtering Execution Example

Commander *controls* dissemination by granting SOF access rights.

Automatic Formatting and Filtering Execution Example

Data are *transformed* to meet device, task, and user requirements.

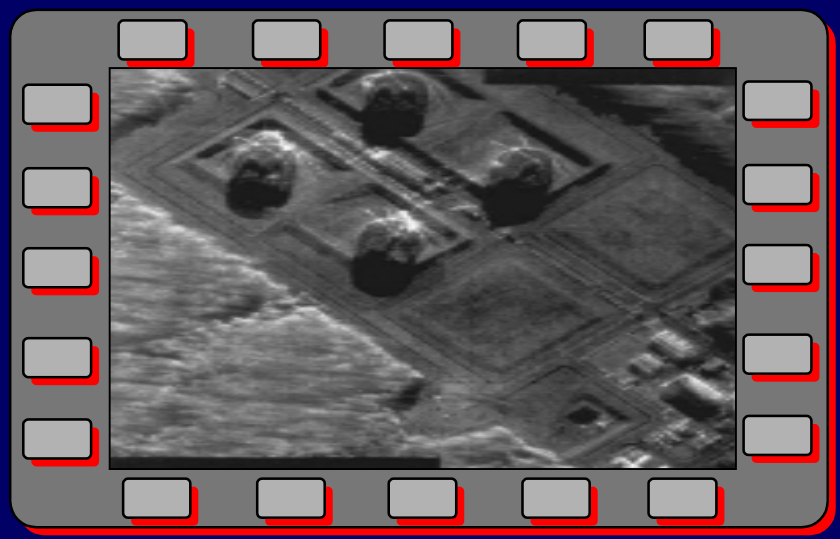


Automatic Formatting and Filtering Execution Example

SOF *publishes* location of TEL to JBI.

Automatic Formatting and Filtering Execution Example

Information is *transformed* for the cockpit.



Automatic Data Capture Combat Support Example

Crew chief identifies failed LRU. This is automatically captured and *published* to JBI.

Logistics *queries* JBI to locate LRU. Loadmaster captures LRU arrival using bar code. Crew chief installs LRU.

F-18E scheduler *subscribes* to aircraft status and assigns sortie. F-18E launches.

Interact Goal

Get the right information

JBI Object Repository

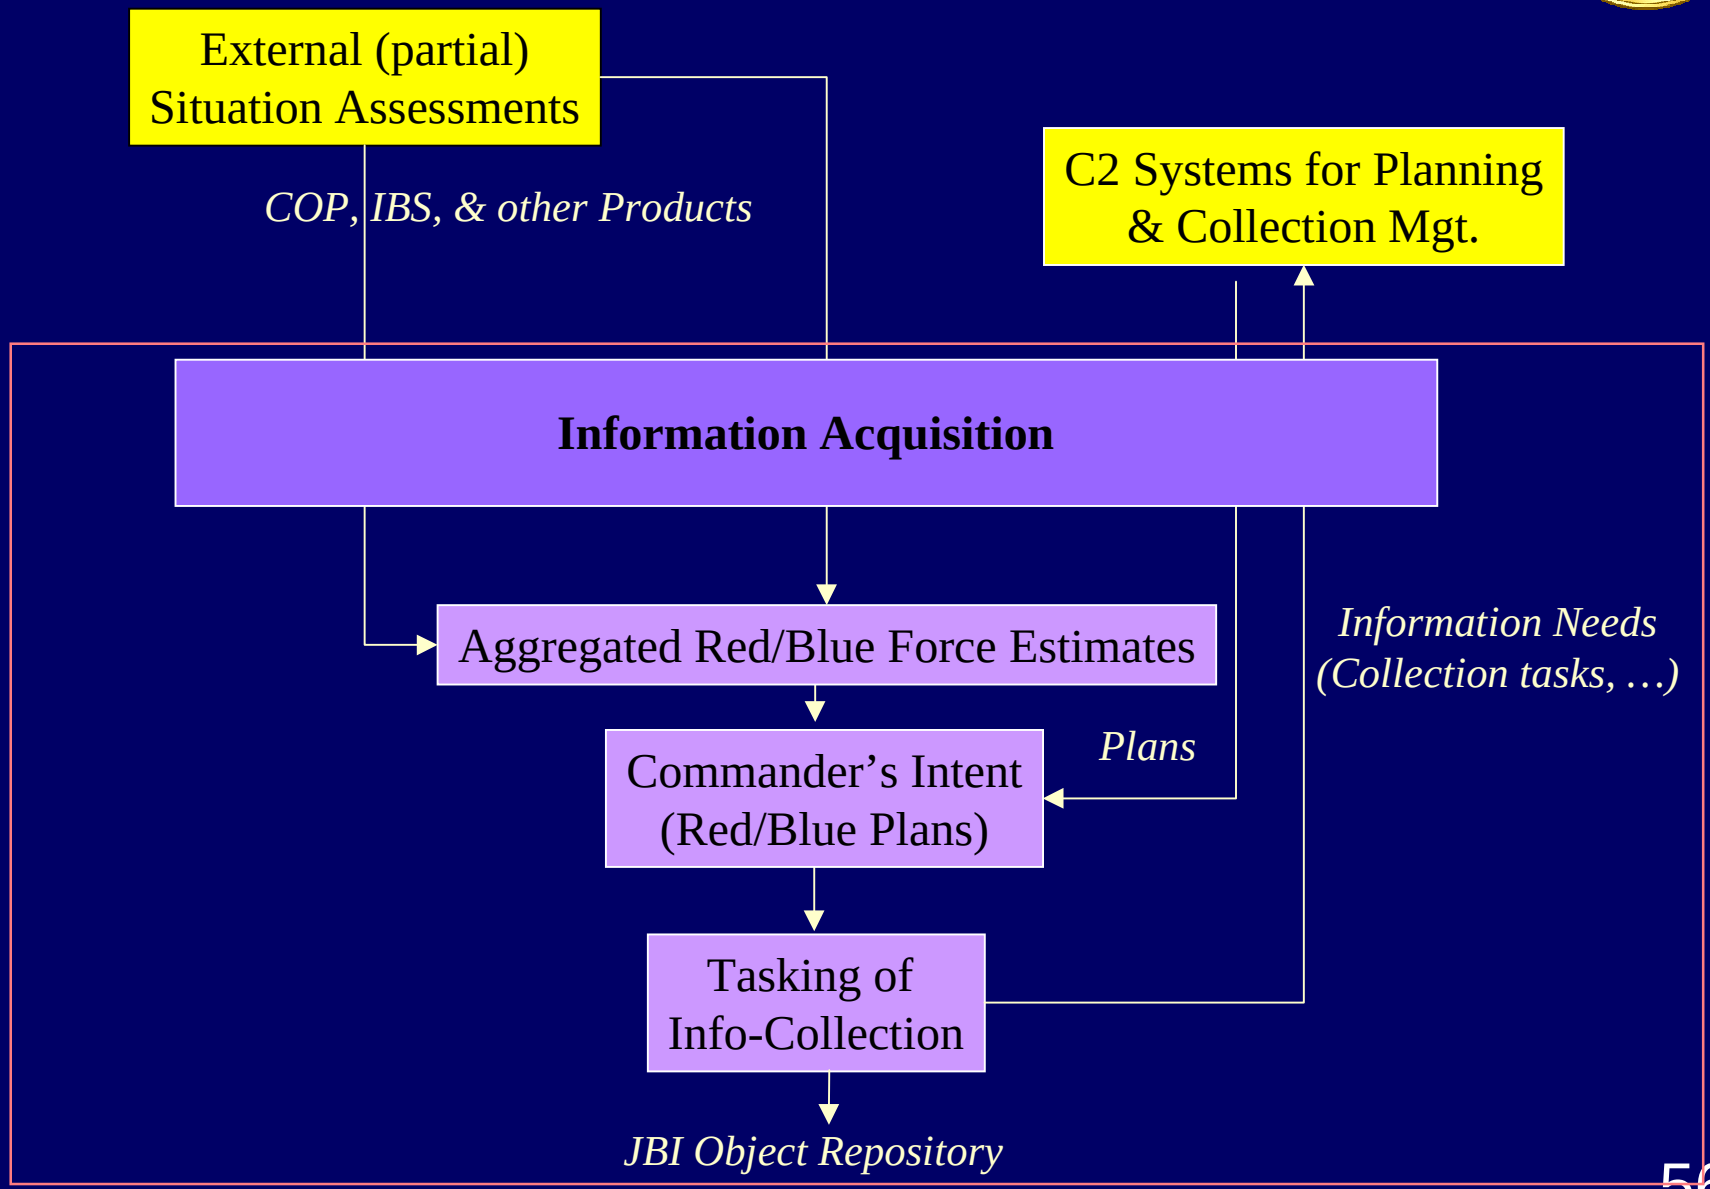
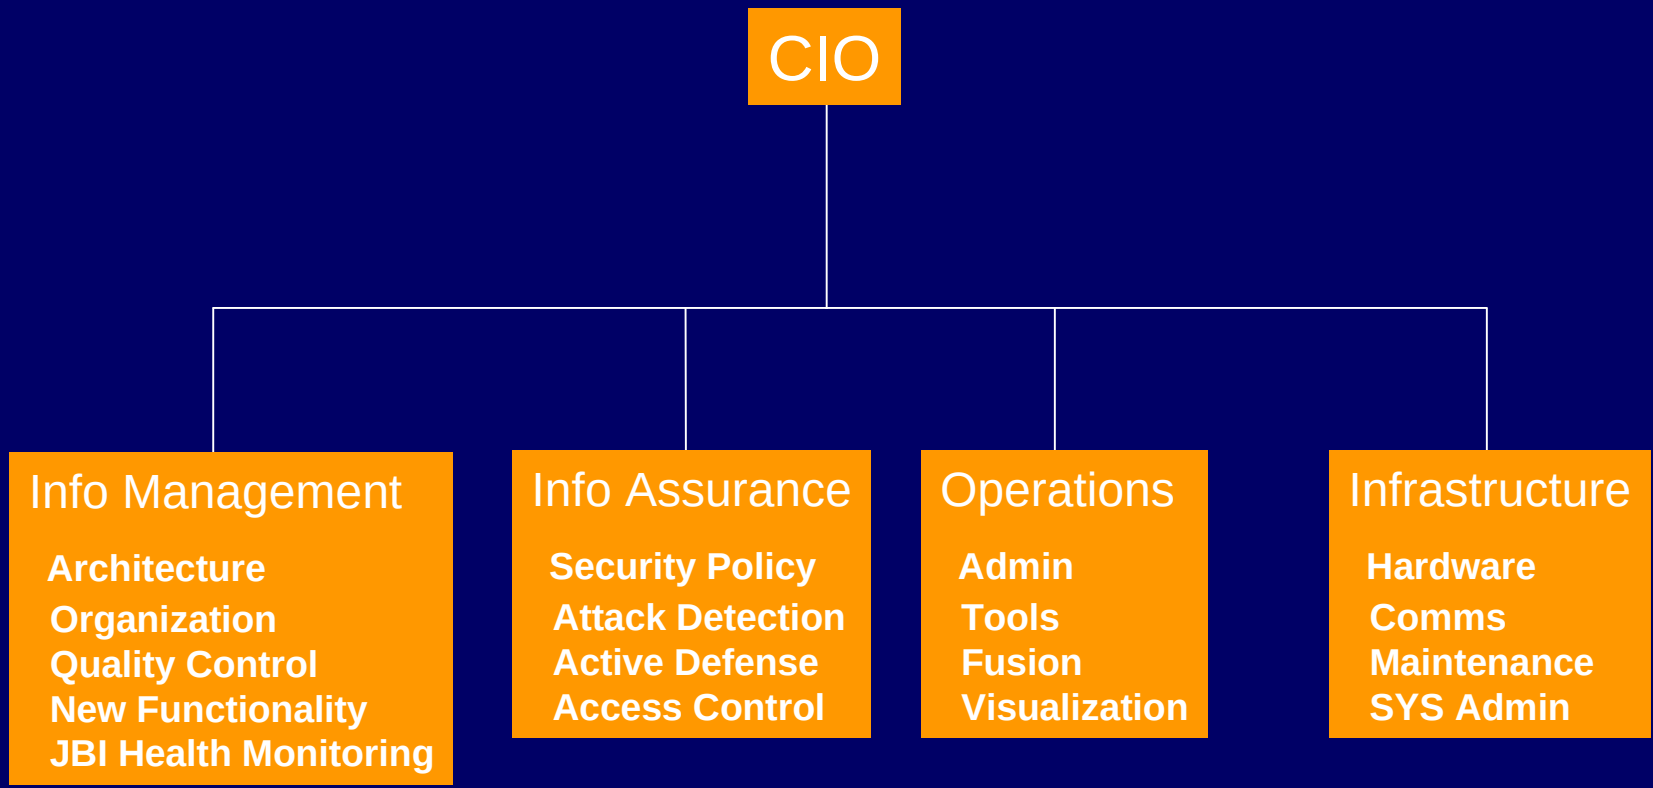
JBI Fusion Functionality



Information Staff

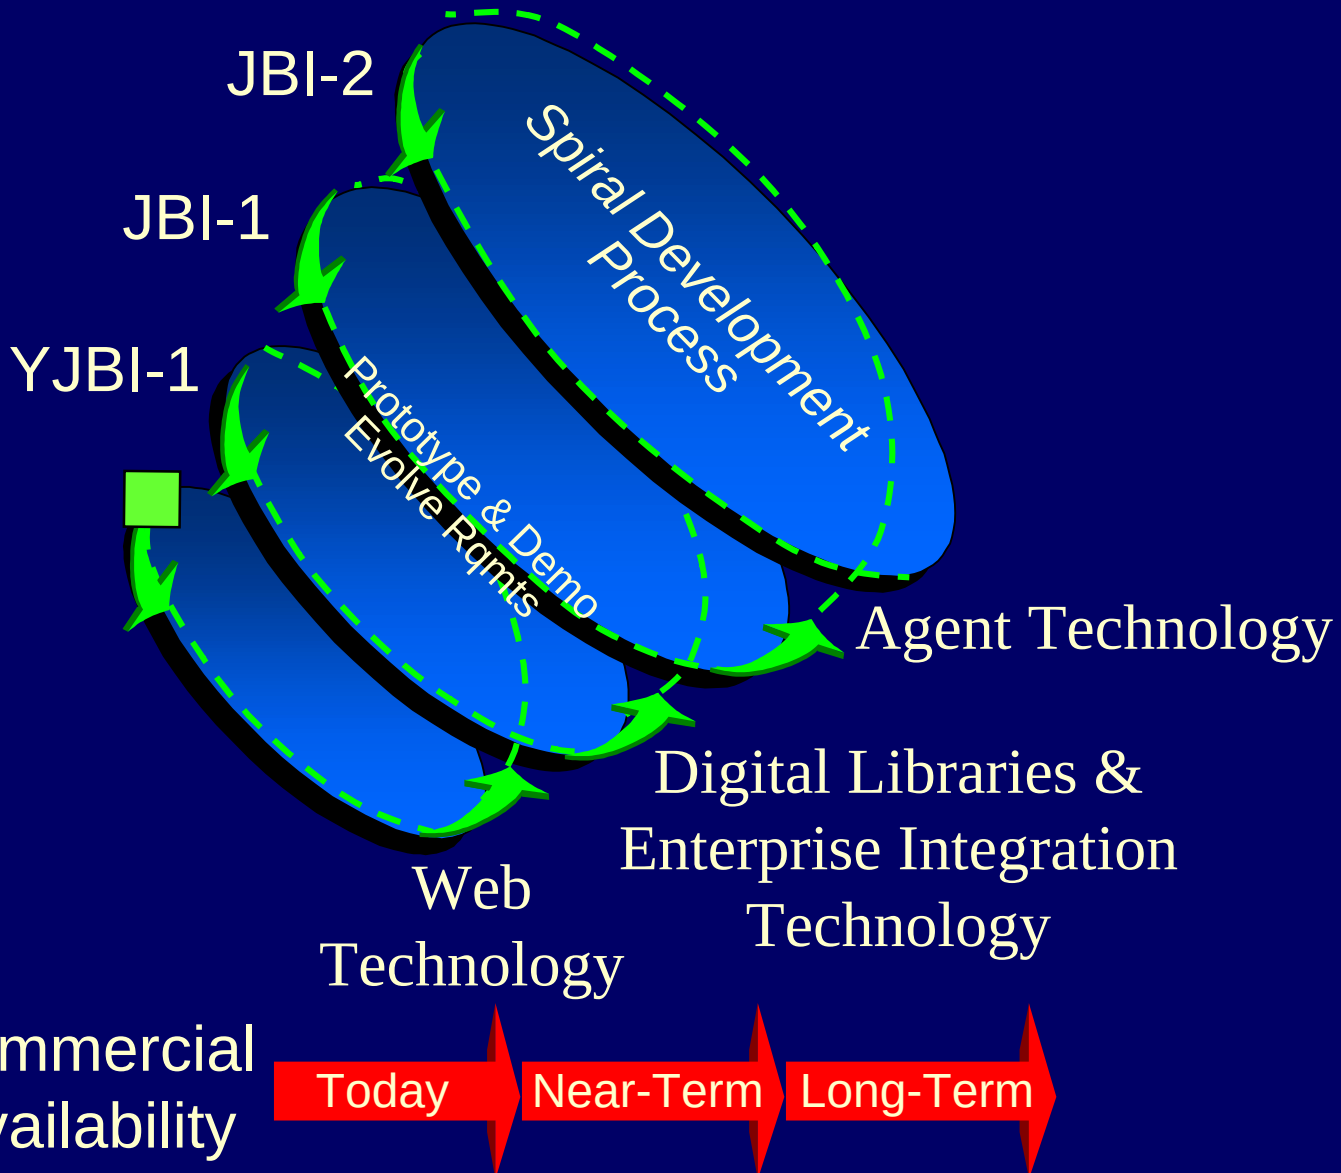
- People who can exploit information for warfighting advantage: need to understand information technology and military missions and business processes
- Organize with skills and authority similar to commercial IT operations staff
- “Own and operate” JBI Platform services
- Understand & adapt JBI information architecture
- Operate JBI as mission evolves: add operational units, connect to coalition partners, integrate with new information sources, enforce access policies

Information Staff Organization

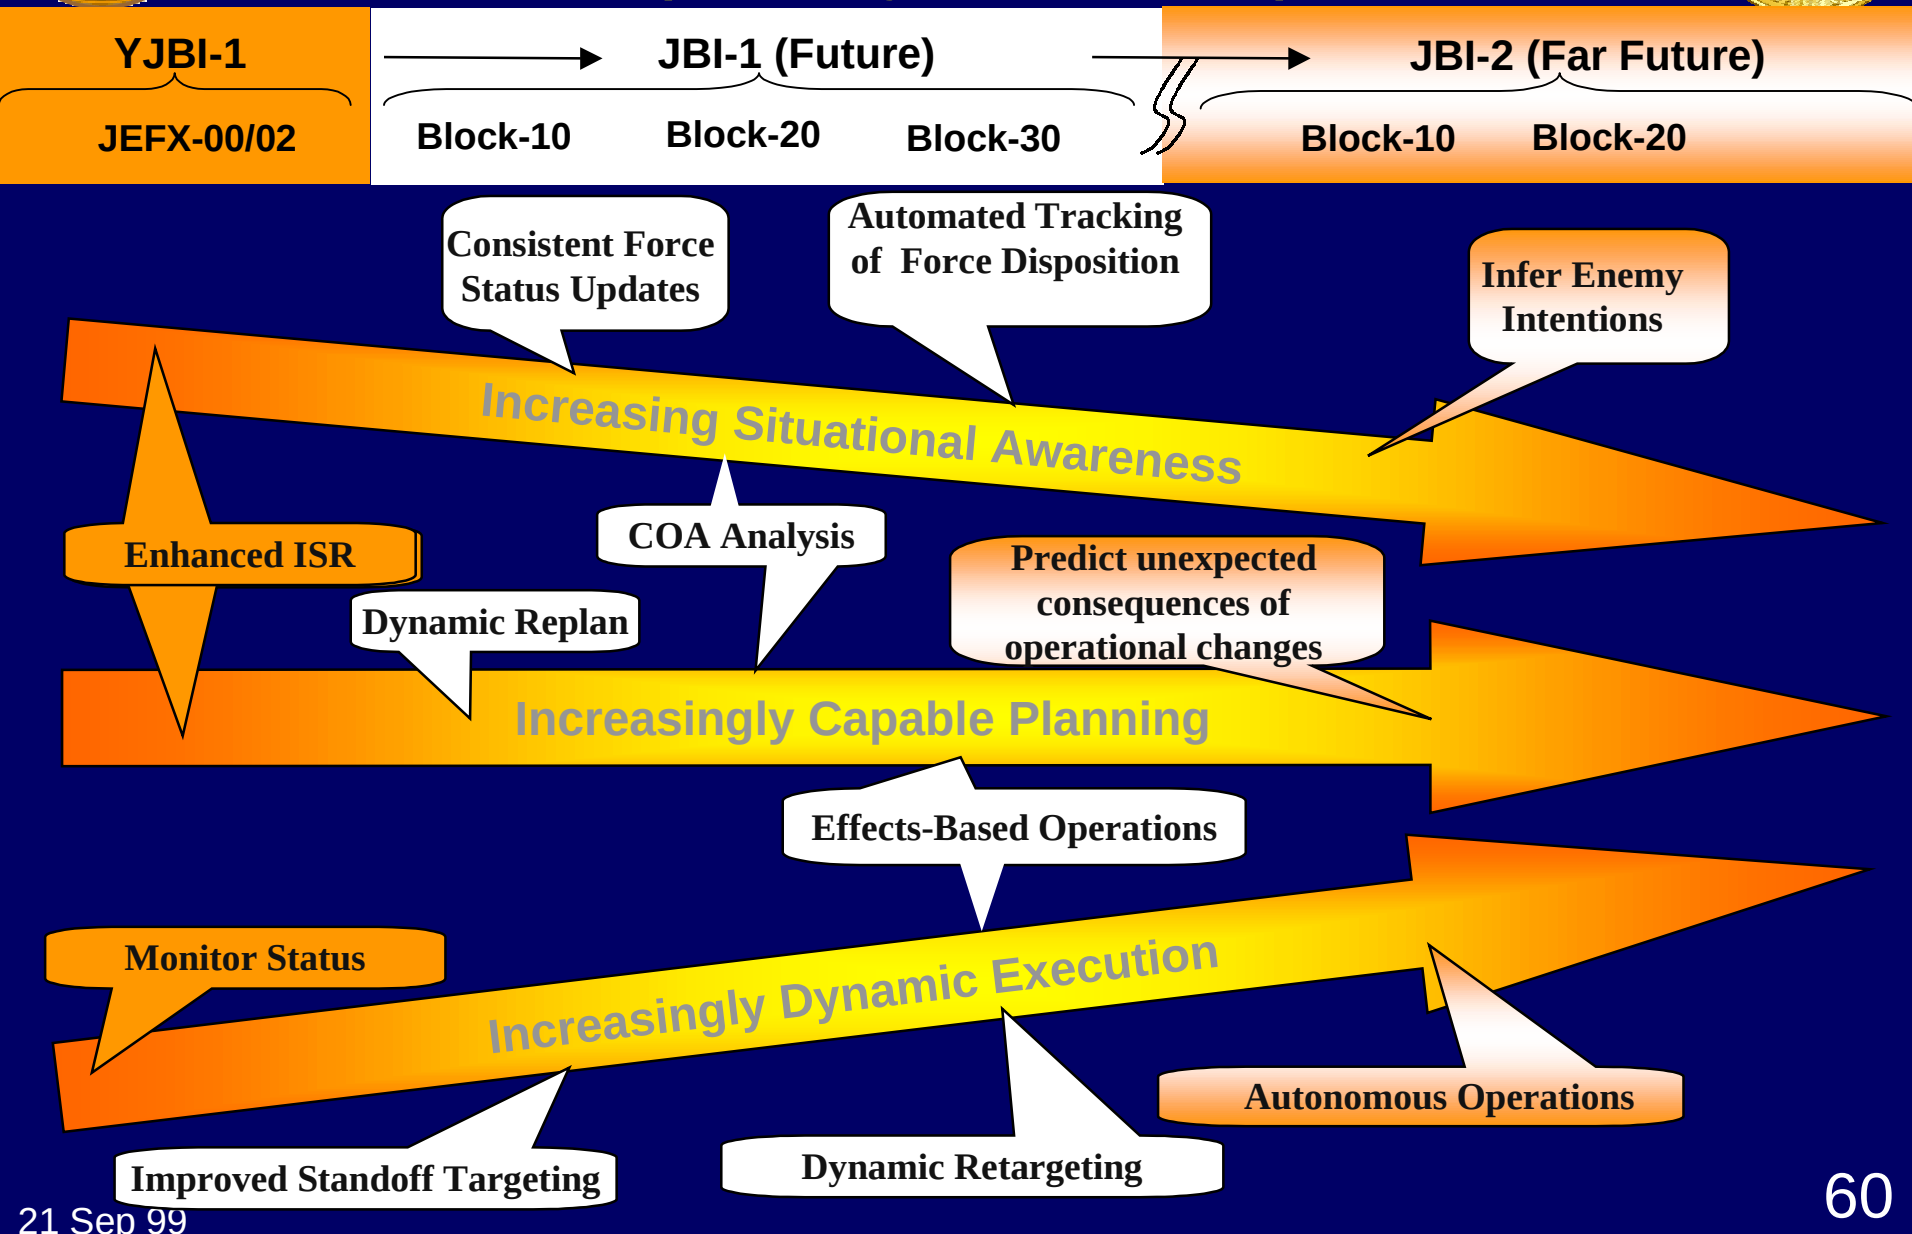


Staffed by functional expertise from Ops, Intel, Logistics, Comm, etc.

Leveraging Commercial Technology



Capability Roadmap



Build It and They Will Come

- Build rapid prototypes *now* (YJBI-1)
  - low cost concept evaluators, possible JEFX00 participation
  - web browser interaction, XML with common representation, COTS middleware
- Begin spiral development (leading to JBI-1)
  - YJBI-1 prototypes used to initiate spiral
  - cross-disciplinary team with tri-service participation
  - supported by JBI architecture analysis
  - supported by concurrent standardization efforts to define tri-service common representations
  - supported by long-term research efforts to evolve components

Specific Recommendations

- AF should make organizational preparations for JBI-1
  - Team AC2ISRC and ESC to develop an integrated C2 capability with the JBI
  - Air staff should create information staff function
- Evolve operational concepts to use JBI
  - Collaborative joint information integration
  - Automatic data capture
- Common representation for force unit templates

Specific Recommendations

- Immediate low-cost prototypes: AFRL/AC2ISRC
- JBI Platform technical architecture: ESC
- Evaluation of relevant COTS: ESC
- Military requirements for C2 Info Integration: AC2ISRC
- Common Representation/Templates: DISA/ESC
- Long term research:
  - Advanced JBI Platform: DARPA with AFRL
  - Advanced fusion concepts: AFRL with DARPA
  - Information assurance: DARPA with AFRL
  - Agent-based technology: DARPA with AFRL
  - Advanced data survivable systems: DARPA/AFRL
  - Active networks: AFRL
  - Dynamic User Modeling: DARPA/AFRL

Actionable Recommendations

- Commit to acquire the JBI as a major weapons system
- Create an Information Staff function
- Develop new concepts of operations at AC2ISRC
- Define common information representations led by ASD-C3I
- Reinforce DARPA R&D investment for JBI technologies
- Focus AFRL, other Service research labs, and battlelabs on evaluating and applying commercial technologies for JBI
- Create the JBI testbed *now* for JEFX 00 participation
- Link JBI testbed to other service efforts in digitized battlefield and network-centric warfare
- Evangelize JBI to the CINCs

Recommendations Relating JBI to Operations Other Than Conventional War Study Recommendations

- Implement a force management capability for the EAF and for OOTCW
- Lead the development and deployment of an integrated ISR - C2 Information Management System
- Implement AEF communications for rapidly emerging crises
- Create a Distributed Mission Readiness System from the Distributed MissionTraining Concept
- The Air Force should integrate planning and execution systems for employment and sustainment

- All JBI recommendations support these OOTCW study recommendations

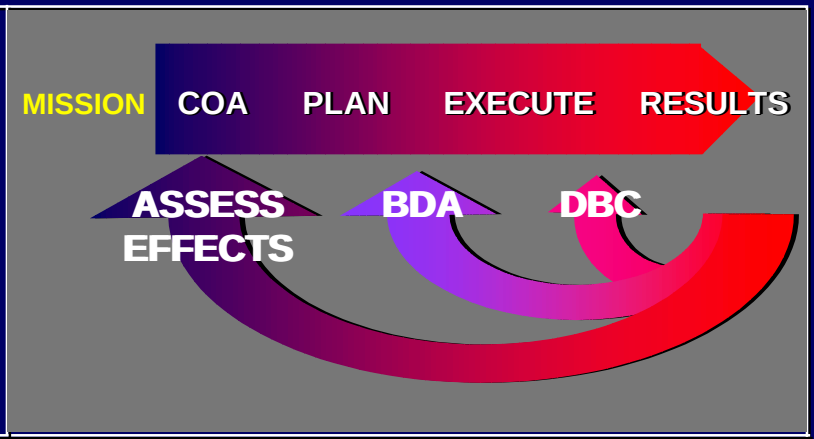
Implement a force management capability for the EAF and for OOTCW

FM/FD&S

Link to BI Study

Military Capability:

A force management system that supports the EAF in the application of aerospace power to OOTCW and enables dynamic effects-based planning, execution, and effects assessment to include strike, airlift, and training. Feedback consists of Dynamic Battle Control (DBC), Action or BDA, and effects assessment.



Capability Initiative:

Continue selective deployment of Theater Battle Management Core System (TBMCS), but:

- Immediately begin preparation of an operational architecture to assure TBMCS meets the needs of the EAF in OOTCW. Include logistics, training and lift aspects. (AC2ISRC)
- Assess the proper future course of action for TBMCS based on this architecture. (AF/XO, SAF/AQ)
- Establish a new function equivalent to AF/XOR for architectures and CONOPS for integrated force management systems. (AF/XO)
- Develop C2ISR education within the Air Force and establish appropriate specialty codes. (AF/DP)

Lead the development and deployment of an integrated ISR - C2 Information Management System

I&V

Link to BI Study

Military Capability:

Meet stringent timelines for tailorable and continuously updated information on demand for warfighters worldwide. Dynamic ISR response to rapidly and significantly changing situations.

Technology / Implementation:

Develop operational architecture, functional requirements, and implementation roadmap. (AC2ISRC)

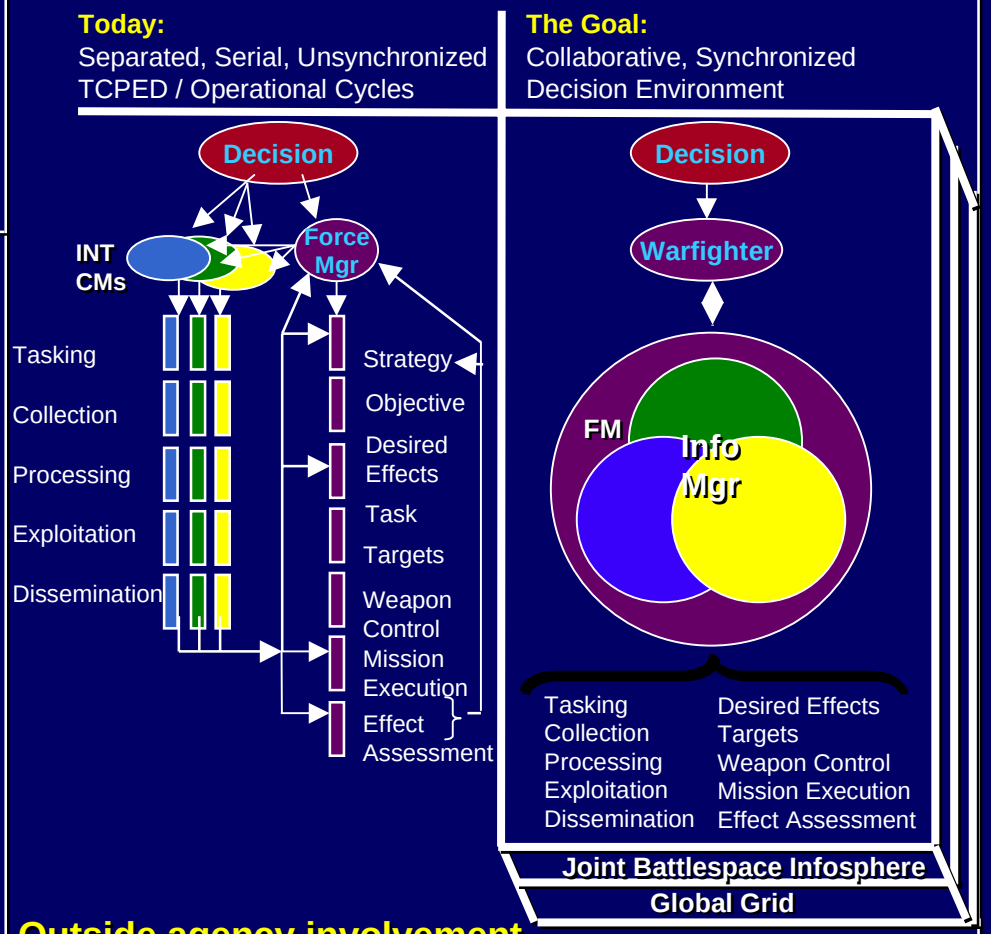
Pursue AF-owned elements of the roadmap. (SAF/AQ)

Lead joint DoD-Intel Community initiative for development and deployment. (AF)

- **JBI & Global Grid provide foundation**

Use demo to drive development of relevant technologies: (SAF/AQ)

- **Representation of Information**
- **Information Fusion**
- **Dynamic Allocation of Sensing Assets**
- **Interaction with the User**
- **Performance Assessment**



Implement AEF communications for rapidly emerging crises

FM

Link to BI Study

Military Capability:

EAF communications enabling:

- **Immediate combat power for OOTCW crisis response anywhere**
- **Global Grid access**
- **Communications to support JBI**
- **Direct links to operational platforms**

Technology Initiatives/Enablers:

Multi-level secure communications architecture and requirements for OOTCW are the same as for MTW with the added features of *rapid reconfigurability, scalability, and deployability.* AEF HW/SW/BW environment should be the same as home station so that we "fight like we train." (AF/SC)

- **Develop and implement coalition interoperability for Joint/ Combined/ Civil EAF operations**
- **Implement a user requirements driven acquisition process with an emphasis on the controller/shooter**

Create a Distributed Mission Readiness System from the Distributed Mission Training Concept

ETE

Link to BI Study

Military Capability:

A robust and flexible AF-wide Distributed Mission Readiness System (DMRS) which integrates all force elements to help train and rehearse AEF personnel for full spectrum global engagement (MTW and OOTCW).

Combat **Logistics**

Force Protection

C⁴ISR

Airlift

Initiatives:

Establish overall AF leadership for DMRS. (AF/XO)

Implement Capstone Requirements Document for DMT and grow it into AF DMRS

- **AF-wide plans, architecture and roadmap (AF/XP, AF/XO)**
- **Formal acquisition strategy and force management plan (SAF/AQ)**
- **DMRS SPO to manage transition and integration (SAF/AQ)**

Maintain priority of current DMT efforts to bridge to DMRS (SAF/AQ, AF/XO)

Address major DMRS technical issues (SAF/AQ)

- **Multi-level security/need-to-know, latency issues, behavioral models**
- **Leverage related efforts in other services, ACOM, DARPA and outside agencies**

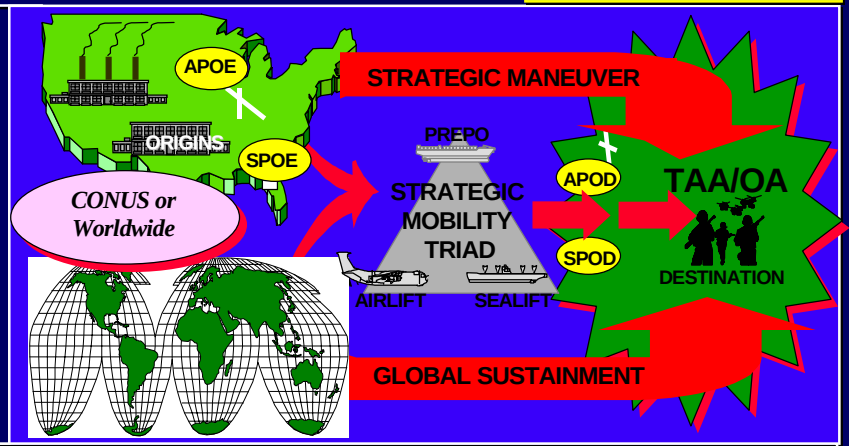
The Air Force should integrate planning and execution systems for employment and sustainment

D&S

Link to BI Study

Military Capability:

An optimized, effects based operational plan which incorporates deployment and sustainment feasibility and reduces deployment footprint



Technology Initiatives

- Develop automated selection of forces to achieve desired effect (AF/XO)
- Optimize deployment flow to achieve incremental, effects-based capability (OPR: AF/IL)

Capability Initiatives

- Develop an integrated operational architecture for employment planning (OPR: AF/XO)
- Develop automated force beddown tool based upon operational and employment characteristics of selected forces (OPR: AF/XO)
- Provide worldwide visibility of available sources of support (OPR: AF/IL)
- Automate deployment tailoring based on allocation of support resources (OPR: AF/IL)
